

STREAMING PLATFORM REDESIGN 2024

An end-to-end UX/UI transformation focused on reducing visual friction, improving content discovery, and establishing a cohesive cross-platform premium aesthetic.

1 HEURISTIC EVALUATION

Excessive Information Density

User testing revealed cognitive overload due to non-standardized card sizes and overlapping text elements.

Poor Content Hierarchy

Primary CTAs were indistinguishable from secondary metadata, leading to a 14% drop in session starts.

Limited Visual Focus

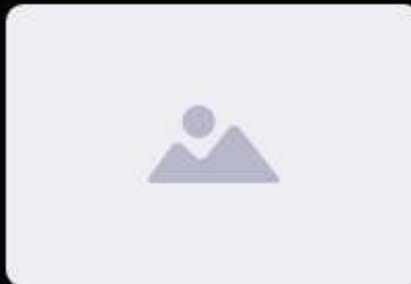

Background clutter competed with movie posters, failing the 5-second aesthetic test for premium engagement.

Key Takeaway

"The goal is to shift from a functional directory to an immersive cinematic experience."
